

## Performance Comparison of Intel Celeron on Intel D845GLVA Motherboards and AMD Sempron on ECS KM400-M2 Motherboards

### For Intel Corporation

#### Executive summary

Intel Corporation (Intel) commissioned Principled Technologies (PT) to run a set of benchmarks and performance tests on four custom-built PCs, two using Intel Celeron processors on Intel D845GLVA motherboards and there other two using AMD Sempron processors on ECS KM400-M2 motherboards. Intel identified the processors; PT selected and purchased the components for the systems, built them, and executed all tests. We tested all systems with Windows XP, Service Pack 2 and all Windows updates applicable as of April 29, 2005.

Other than the benchmarks and the programs they required, we did not install any additional software on the systems. To accommodate specific requirements and/or issues of some of the tests, we had to make some system changes; we note all such changes in the notes below the test results. In the Test methodology section below, we document the methodologies we followed with each test.

We executed the following benchmarks and performance tests.

- SYSSmark 2004
- WebMark 2004
- PCMark04 CPU test
- SiSoft Sandra 2005
  - CPU Arithmetic Benchmark
  - CPU Multi-Media Benchmark
  - Memory Benchmark (Bandwidth)
  - Cache & Memory Benchmark (Bandwidth)

We report the mean of three test runs with each benchmark unless we note otherwise in the Test methodology section. We normalized all results to those of the systems with the Intel Celeron 2.10 GHz and the Intel Celeron 2.40 GHz processor. Thus, those systems' results are 1.00 for each of the tests in the charts. In Figure 1, we compared the system with the Intel Celeron 2.10 to system with the AMD Sempron 2200+. In Figure 2, we compared the system with the Intel Celeron 2.40 to the system with the AMD Sempron 2600+. For the AMD Sempron systems, results greater than 1.00 indicate performance above that of the Celeron 2.10 and 2.40 systems, while results below 1.00 indicate slower performance.

Processor Manufacturer and Model Type / Motherboard	Intel Celeron 2.10 / Intel D845GLVA	AMD Sempron 2200+ / ECS KM400-M2
PCMark04 1.20 – CPU	1.00	0.81
WebMark 2004 + Patch 1 - Geomean (overall score) - OFF LINE	1.00	1.04
SYSmark 2004 + Patch 2 - Overall score	1.00	0.95
SiSoft Sandra 2005 - CPU Arithmetic Benchmark - Whetstone FPU MFLOPS	1.00	1.23
SiSoft Sandra 2005 - CPU Arithmetic Benchmark - Dhrystone ALU MFLOPS	1.00	0.90

Processor Manufacturer and Model Type / Motherboard	Intel Celeron 2.10 / Intel D845GLVA	AMD Sempron 2200+ / ECS KM400-M2
SiSoft Sandra 2005 - CPU Arithmetic Benchmark - Whetstone iSSE2 MFLOPS	1.00	N/A
SiSoft Sandra 2005 - CPU Multi-Media Benchmark - Integer x8 iSSE2 - it/s	1.00	0.87
SiSoft Sandra 2005 - CPU Multi-Media Benchmark - Float x4 iSSE2 -it/s	1.00	0.75
SiSoft Sandra 2005 - Memory Benchmark - RAM Bandwidth Int Buff'd iSSE2 - MB/s	1.00	0.95
SiSoft Sandra 2005 - Memory Benchmark - RAM Bandwidth Float Buff'd iSSE2 - MB/s	1.00	0.87
SiSoft Sandra 2005 - Cache/Memory Benchmark - Combined Index results - MB/s	1.00	0.74
SiSoft Sandra 2005 - Cache/Memory Benchmark - Speed factor	1.00	0.58

**Figure 1: Results of the performance tests on Intel Celeron 2.10 and AMD Sempron 2200+ systems, normalized to the results of the system with the Intel Celeron 2.10 GHz processor.**

Processor Manufacturer and Model Type / Motherboard	Intel Celeron 2.40 / Intel D845GLVA	AMD Sempron 2600+ / ECS KM400-M2
PCMark04 1.20 – CPU	1.00	0.86
WebMark 2004 + Patch 1 - Geomean (overall score) - OFF LINE	1.00	1.12
SYSSmark 2004 + Patch 2 - Overall score*	1.00	1.00
SiSoft Sandra 2005 - CPU Arithmetic Benchmark - Whetstone FPU MFLOPS	1.00	1.33
SiSoft Sandra 2005 - CPU Arithmetic Benchmark - Dhrystone ALU MFLOPS	1.00	0.96
SiSoft Sandra 2005 - CPU Arithmetic Benchmark - Whetstone iSSE2 MFLOPS	1.00	N/A
SiSoft Sandra 2005 - CPU Multi-Media Benchmark - Integer x8 iSSE2 - it/s	1.00	0.93
SiSoft Sandra 2005 - CPU Multi-Media Benchmark - Float x4 iSSE2 -it/s	1.00	0.79
SiSoft Sandra 2005 - Memory Benchmark - RAM Bandwidth Int Buff'd iSSE2 - MB/s	1.00	0.94
SiSoft Sandra 2005 - Memory Benchmark - RAM Bandwidth Float Buff'd iSSE2 - MB/s	1.00	0.88
SiSoft Sandra 2005 - Cache/Memory Benchmark - Combined Index results - MB/s	1.00	0.78
SiSoft Sandra 2005 - Cache/Memory Benchmark - Speed factor	1.00	0.60

**Figure 2: Results of the performance tests on Intel Celeron 2.40 and AMD Sempron 2600+ systems, normalized to the results of the system with the Intel Celeron 2.40 GHz processor.**

\*For SYSSmark 2004 testing on the AMD Sempron 2600+/ECS KM400-M2 system, we ran multiple three-iteration tests to generate the Full Disclosure Report (FDR), but were consistently unsuccessful due to errors that caused the applications to crash or due to high variability. We were forced to run SYSSmark 2004 with a single iteration and generate an FDR based on that run. These results are reflected in Figure 2 above.

Appendix A provides the cost of the hardware components we used to build all the systems and Appendix B shows the total cost of each system. Appendix C provides details of their configurations and Appendix D shows configuration details that the CPU-Z, Version 1.28 software utility reported.

## Test methodology

To create a level testing environment, we custom-built all four systems using as much common hardware as possible. Figure 3 summarizes key aspects of the configurations of all four systems; Appendix B provides detailed configuration information.

Processor	Intel Celeron 2.10	Intel Celeron 2.40	AMD Sempron 2200+	AMD Sempron 2600+
Motherboard	Intel D845GLVA	Intel D845GLVA	ECS KM400-M2	ECS KM400-M2
Chipset	845GL	845GL	VIA-KM400	VIA-KM400
RAM (512MB in each)	2 x 256MB PC2700	2 x 256MB PC2700	2 x 256MB PC2700	2 x 256MB PC2700
Hard drive (80GB in each)	Seagate ST380011A	Seagate ST380011A	Seagate ST380011A	Seagate ST380011A
DVD-ROM in each	Dynex DX-DVDR100	Dynex DX-DVDR100	Dynex DX-DVDR100	Dynex DX-DVDR100

**Figure 3: Summary of system configurations.**

We did not purchase monitors with the systems, so we used monitors from our test stock. (See Appendix C for the standard graphics adapter settings we used.)

After building each system, we then installed Windows XP, Service Pack 2 using the following process:

1. Pressed Next to set up Windows XP.
2. Selected United States, English and U.S. keyboard.
3. Selected Eastern Time.
4. Selected “Yes” to both the manufacturer (if present) and Microsoft End User License Agreements.
5. Selected “No” to automatic updates, because we wanted to manually control and monitor which updates we applied to each system to make sure the systems had comparable updates.
6. We named each computer after its maker and speed (e.g., Celeron2400).
7. We left each machine description blank.
8. Selected “Skip” during the How will this computer connect to the Internet?
9. Selected “No” to registering with Microsoft.
10. Selected “Finish”.

We used the CDs that came with each motherboard to install the drivers for all motherboard components, such as chipsets, IDE controllers, integrated graphics and audio adapters, and network LAN adapters.

We then ran the Windows Update feature through Microsoft’s Web site. We applied the following updates on 4/29/2005 to all systems:

- Critical Updates
  - KB886185
- Security Updates
  - KB891781
  - KB888113
  - KB873333
  - KB888302

- KB890175
  - KB893086
  - KB893066
  - KB890859
  - KB885835
  - KB885250
  - KB873339
  - KB885836
- Security Updates for Windows Messenger
  - KB887472
- Update for Windows XP
  - KB887742
- Windows Malicious Software Removal Tool – April 2005
  - KB890830
- Cumulative Security Update for Internet Explorer for Windows XP Service Pack 2
  - KB890923
- Microsoft Windows Installer 3.1
- Windows Media Player 10
- Update for Windows Media Connect
- Cumulative Update for Outlook Express
  - KB887797
- Microsoft Windows Journal Viewer (Windows XP)
- Microsoft .NET Framework version 1.1
- Microsoft .NET Framework 1.1 Service Pack 1
  - KB886903
- Update for Windows XP HighMAT Support in CD Writing Wizard
  - KB831240

The Windows Update site suggested the following update for the AMD Sempron 2200+ and AMD Sempron 2600+ systems, so we applied that update.

- VIA Technologies Inc. – Networking – VIA Rhine II Fast Ethernet Adapter – Released 3/14/2005

We then used Symantec's Ghost product to capture an image of each system's disk over our local network to a server. (To avoid perturbing any system's disk, we did not make a local Ghost image on that system's disk.) We then burned each Ghost image to a DVD.

#### *Standard process before starting each benchmark or test*

Each time we were to run a new benchmark or test on a machine, we used the Ghost image DVD for that system to return the machine to its original, just-set-up image. We then installed the software necessary to run the benchmark or test, made any system changes necessary to let the benchmark or test run, and rebooted.

After we completed each run of a benchmark or test, we rebooted before running the next iteration of that benchmark or test.

The following sub-sections summarize the steps we followed to run each of the benchmarks/tests in this report. These steps are the ones we followed to get successful runs of each benchmark/test. (In some cases we had to experiment to find workarounds for issues with the test; the sections below include the steps we discovered after that experimentation.)

#### SYSmark 2004 Office Productivity and Internet Content Creation (with Patch2)

We performed the following steps on each PC to make it ready to run this benchmark:

1. Perform the steps BAPCo recommends for readying a PC to run SYSmark 2004:
  - a. Right-click My Computer and choose Properties->Advanced tab. Choose the Settings button under the Performance heading. Choose the Advanced tab. Click the Change button under the Virtual memory heading. Select the Custom size radio button. Set the Windows XP Virtual memory size to twice the physical memory size (e.g., with 512MB of physical RAM set the Virtual memory to 1024MB) by entering that figure for both the Initial size and Maximum size fields. Click OK and close all My Computer windows.
  - b. Via the Printers and faxes option on the Control panel, uninstall any printers or faxes currently on the system by right-clicking each installed printer and fax and selecting Delete. The benchmark requires this step.
  - c. Right-click My Computer and choose Properties->System Restore tab. Select Turn off System Restore on all drives to turn off System Restore. The benchmark requires this step.
  - d. Right-click My Computer and choose Properties->Automatic Updates tab. Select Turn off Automatic Updates to disable Windows Update.
  - e. Reboot the system.
2. Install SYSmark 2004.
  - Place SYSmark 2004 CD in the DVD-ROM drive.
  - Click Next at the SYSmark 2004 Setup dialog box.
  - Accept the license agreement, and click Next.
  - Fill out the User Name, Company Name, and Serial Number fields in the Customer Information dialog box, and click Next.
  - Click Next at the Destination Directory dialog box.
  - Click Next at the Select Program Folder dialog box.
  - Click Yes at the Question dialog box.
  - Click Finish at the Installation Complete dialog box, and let the system reboot.
3. Install SYSmark 2004 patch 2.
  - Click Yes at the Question dialog box.
  - Click Finish at the Installation Complete dialog box.

We rebooted before the first SYSmark 2004 run (it reboots itself during its three real runs) and then followed this process to run the benchmark:

1. Launch SYSmark 2004.
2. Click Run on the left-side menu.
3. Select "Official Run", and choose three iterations. SYSmark 2004 will automatically reboot the system.
4. When the benchmark has completed the three official runs, the main SYSmark 2004 menu will appear. Select the Reports button, then Official Report scores, to view SYSmark 2004's test scores.

This benchmark produces, among other results, an Overall score that reflects the three runs; higher scores are better. Because the benchmark itself uses all three runs to compute its Overall score, we report that score (as opposed to the median three runs) in Figures 1 and 2.

#### WebMark 2004 (with Patch 1; offline)

We performed the following steps on each PC to make it ready to run this benchmark:

We first installed WebMark 2004:

1. Perform the steps BAPCo recommends for readying a PC to run SYSmark 2004:
  - a. Right-click My Computer and choose Properties->Advanced tab.
  - b. Choose the Settings button under the Performance heading.
  - c. Choose the Advanced tab.
  - d. Click the Change button under the Virtual memory heading.

- e. Select the Custom size radio button.
  - f. Set the Windows XP Virtual memory size to twice the physical memory size (e.g., with 512MB of physical RAM set the Virtual memory to 1024MB) by entering that figure for both the Initial size and Maximum size fields.
  - g. Click OK, and close all My Computer windows.
  - h. Right-click My Computer and choose Properties->System Restore tab.
  - i. Select Turn off System Restore on all drives to turn off System Restore. The benchmark requires this step.
  - j. Click OK, and close all My Computer windows.
  - k. Right-click My Computer and choose Properties->Automatic Updates tab.
  - l. Select Turn off Automatic Updates to disable Windows Update.
  - m. Reboot the system.
2. Place WebMark 2004 CD in the DVD-ROM drive.
  3. Click Next at the Install Shield Wizard dialog box.
  4. Click the Client install button, and click Yes at the Question dialog box.
  5. Accept the license agreement by clicking Yes.
  6. Enter "Default" for Company Name, and click Next at the Customer Information dialog box.
  7. Click Next at the Destination Directory dialog box.
  8. Enter the registration code, and click Next.
  9. Click OK at the Congratulations dialog box.
  10. Click Finish at the Installation Complete dialog box.
  11. Place the WebMark CD in the DVD-ROM of the system, and double-click the WebMark Patch 1 update installation file.
  12. When prompted, click on the Client Version button to update the benchmark.
  13. Click Finish at the Installation Complete dialog box.
  14. Reboot the system.

We rebooted before each run, then followed this process to run the test:

1. Double-click on the WebMark 2004 desktop icon.
2. In the Web-based interface, click on Run Benchmark.
3. Under Project name, enter the name of the system (e.g., INTELCELERON21 (no spaces)).
4. Select Offline mode.
5. Select Custom Run.
6. Select one iteration (changing it from three iterations). We did this because the benchmark could not reliably complete three runs on most test systems.
7. Click Run Project, and the benchmark will begin.
8. Once it completes, the WebMark Web interface reappears with the results.
9. Click Generate FDR.
10. Once the FDR is complete, click Export FDR and save the WMR file.
11. Reboot the system, and repeat two more times to generate three individual test runs.

The benchmark produces, among other results, an overall score; higher scores are better. When performing the Office Run tests, WebMark does not produce multiple scores for each run; rather, it computes its own geometric mean of the three runs. In our tests, however, WebMark 2004 could not generate an official FDR report due to high variances between the three test results. To complete the WebMark 2004 tests, we chose to perform three different individual test runs. We presented in Figures 1 and 2 the normalized median result of those three runs.

#### PCMark04 CPU Test

We performed the following steps on each PC to make it ready to run this benchmark:

1. PCMark04 requires Windows Media Encoder 9, so download Windows Media Encoder 9 from Microsoft's Web site (<http://www.microsoft.com/windows/windowsmedia/9series/encoder/default.aspx>).

2. Double-click on the downloaded file, and accept all default settings.
3. Click Finish at the Installation complete dialog box
4. Place the PCMark04 Business Edition CD in the DVD-ROM drive.
5. Click Next at the Install Shield Wizard dialog box.
6. Click the "I accept the terms of the license agreement" check box at the License Agreement dialog box.
7. Click Next at the Choose Destination Location dialog box.
8. Click Install at the Installation dialog box.
9. Enter the registration code, and click Next.
10. Click OK at the Congratulations dialog box.
11. Click Finish at the Installation Complete dialog box.

We rebooted before each run and then followed this process to run the test:

1. Launch PCMark04.
2. Under the Tests menu, click Select.
3. Click on the CPU Test Suite check box to select all tests available under the CPU category. Make sure no other tests have been selected.
4. Click the Run PCMark button to run the tests.
5. When the test completes, a message box appears. Click on the Details button towards the bottom of the box.
6. Record the overall CPU score.
7. Click on the Details tab at the top, and expand the CPU category. Record all the individual test results. In all cases, higher results are better.

The benchmark produces, among other results, an overall score; higher scores are better in all cases.

#### SiSoft Sandra 2005 tests

We performed the following steps on each PC to make it ready to run this benchmark:

1. Place the Sandra 2005 CD in the DVD-ROM drive. A Web installation interface appears.
2. Click on English (EN).
3. Click on "Install Sandra Professional 2005.SR1"
4. At the File Download prompt, click Run.
5. At the Security Warning, click Run.
6. Select English at the Select Setup Language prompt.
7. Use all the default settings for installation. Make sure the radio button is filled to select the following options (which are the default settings):
  - o Windows 32-bit x86 version
  - o Disable remote services
  - o Internal (Jet) Database
8. Leave the Launch SiSoftware Sandra Professional check in the check box, and click Finish.
9. Enter the serial number to complete the full installation.
10. Shutdown Sandra 2005.
11. Reboot the system.

We rebooted before each run and then followed the processes below to run the Sandra 2005 tests. We ran each test three times.

To run the CPU Arithmetic Benchmark (FPU):

1. Double-click on the SiSoft Sandra 2005 icon on the desktop to open the management console.
2. In the section titled Benchmarking Modules, double-click on the CPU Arithmetic Benchmark icon.
3. In the CPU Arithmetic Benchmark console, press F5 to start the benchmark.
4. Once it completes, record the Whetstone FPU, Dhrystone ALU, and Whetstone iSSE2 results.

5. Reboot the system.

To run the CPU Multi-Media Benchmark:

1. Double-click on the SiSoft Sandra 2005 icon on the desktop to open the management console.
2. In the section titled Benchmarking Modules, double-click on the CPU Multi-Media Benchmark icon.
3. In the CPU Multi-Media Benchmark console, press F5 to start the benchmark.
4. Once it completes, record the Integer x8 iSSE2 and Float x4 iSSE2 results
5. Reboot the system.

To run the Memory Bandwidth Benchmark:

1. Double-click on the SiSoft Sandra 2005 icon on the desktop to open the management console.
2. In the section titled Benchmarking Modules, double-click on the Memory Bandwidth Benchmark icon.
3. In the Memory Bandwidth Benchmark console, press F5 to start the benchmark.
4. Once it completes, record the RAM Bandwidth Int Buff'd iSSE2 and RAM Bandwidth Float Buff'd iSSE2 results.
5. Reboot the system.

To run the Cache & Memory Bandwidth Benchmark:

1. Double-click on the SiSoft Sandra 2005 icon on the desktop to open the management console.
2. In the section titled Benchmarking Modules, double-click on the Cache & Memory Bandwidth Benchmark icon.
3. In the Cache & Memory Bandwidth Benchmark console, press F5 to start the benchmark.
4. Once it completes, record the Combined Index (MB/s) and Speed Factor results.
5. Reboot the system.

## Appendix A: Hardware purchase information

Because we built each of these systems, we had to purchase a variety of components. This appendix presents the costs of all the components.

Figure 4 presents the pricing information for the four motherboards.

System	Intel D845GHVA	ECS KM400-M2
Processor	Intel Celeron 2.10 and 2.40	AMD Sempron 2200+ and 2600+
Online purchase site	Hyper Microsystems, Inc. ( <a href="http://hypermicro.com">hypermicro.com</a> )	NewEgg.com
Online Inventory Number	D845GLVAL PGA478 MATX VIDEO LAN	N82E16813135193
Unit price (\$)	55.00	37.50
Tax (\$) <sup>(1)</sup>	0.00	0.00
Shipping (\$) <sup>(2)</sup>	49.19	6.49
Total we paid (\$)	104.19	43.99
Number of units	2	2
Extended total we paid (\$)	208.38	87.98

**Figure 4: Purchase information for the two different motherboards we used in the four systems.**

Notes:

<sup>(1)</sup> [www.newegg.com](http://www.newegg.com) and [www.hypermicro.com](http://www.hypermicro.com) did not charge tax.

<sup>(2)</sup> We assigned each motherboard a prorated portion of the total shipping charge we paid for each order.

Figure 5 presents the pricing information for the four processors.

Processor	Intel Celeron 2.10 GHz	Intel Celeron 2.40 GHz	AMD Sempron 2200+ (1.50 GHz)	AMD Sempron 2600+ (1.833 GHz)
Online purchase site	Spartan Tech ( <a href="http://spartantech.com">spartantech.com</a> )	NewEgg.com	Mwave.com	NewEgg.com
Online Inventory Number	INC478- 2100OEM	N82E168191121 76	BA20818	N82E168191042 12
Unit price (\$)	63.00	79.49	52.50	80.99
Tax (\$) <sup>(1)</sup>	0.00	0.00	0.00	0.00
Shipping (\$) <sup>(2)</sup>	20.00	2.99	19.48	23.59
Total we paid (\$)	83.00	82.48	71.98	104.59

**Figure 5: Purchase information for the four processors in the systems.**

<sup>(1)</sup> [www.mwave.com](http://www.mwave.com), [www.newegg.com](http://www.newegg.com), and [www.spartantech.com](http://www.spartantech.com) did not charge tax.

<sup>(2)</sup> We assigned each processor a prorated portion of the total shipping charge we paid for each order.

Figure 6 below presents the pricing information for the common hardware components for all four systems. We purchased some of these components locally at retail outlets. For all such purchases, tax reflects the North Carolina sales tax rate of 7.0%. We also paid no shipping on any such equipment, because we picked it up at the following stores:

Best Buy #299  
 Pleasant Valley Promenade  
 6254 Glenwood Avenue  
 Raleigh, NC 27612

Best Buy #147  
 Cary Crossroads Center  
 237 Crossroads Blvd.  
 Cary, NC 27511

Intrex  
 Parkway Pointe Shopping Center  
 2448 SW Cary Parkway  
 Cary, NC 27513

## Appendix B: Cost comparison information

Figure 8 presents the total cost of the components in each of the systems we built.

Processor Manufacturer and Model Type / Motherboard	Intel Celeron 2.10	Intel Celeron 2.40	AMD Sempron 2200+	AMD Sempron 2600+
Processor	63.00	79.49	52.50	80.99
CPU Fan (if purchased separately)	14.99	N/A	N/A	N/A
Motherboard	55.00	55.00	37.50	37.50
Memory (PC2700 RAM)	29.11	29.11	29.11	29.11
Hard Drive	62.70	62.70	62.70	62.70
DVD-ROM Drive (16x)	49.99	49.99	49.99	49.99
Case (with 200W power supply)	45.99	45.99	45.99	45.99
<b>Total</b>	<b>320.78</b>	<b>322.28</b>	<b>277.79</b>	<b>306.28</b>

**Figure 8: Complete system cost comparison.**

## Appendix C: Test system configuration information

This appendix provides detailed configuration information about each of the four test systems.

Processor	Intel Celeron 2.10	Intel Celeron 2.40	AMD Sempron 2200+	AMD Sempron 2600+
<b>General</b>				
Processor and OS kernel: (physical, core, logical) / (UP, MP)	1P1C1L / UP	1P1C1L / UP	1P1C1L / UP	1P1C1L / UP
Number of physical processors	1	1	1	1
Single/Dual Core processors	Single core	Single core	Single core	Single core

## Appendix D: CPU-Z Version 1.28 test system configuration information

This appendix provides detailed configuration information from the CPU-Z, Version 1.28 software utility about each of the four test systems.

Processor	Intel Celeron 2.10	Intel Celeron 2.40
<b>Processor Information</b>		
Number of CPUs	1	
APIC ID	0	
Name	Intel Celeron	Intel Celeron
Code name	Northwood	Northwood
Specification	Intel(R) Celeron(R) CPU 2.10GHz	Intel(R) Celeron(R) CPU 2.40GHz
Family/Model/Stepping	F27	F29
Extended Family/Model	0/0	0/0
Brand ID	10	10
Package	mPGA-478	mPGA-478
Core Stepping	C1	D1
Technology	0.13µ	0.13µ
Instructions Sets	MMX, SSE, SSE2	MMX, SSE, SSE2
Clock Speed	2099.7 MHz	2399.7 MHz
Clock multiplier	x21.0	x24.0
Front Side Bus Frequency	100.0 MHz	100.0 MHz
Bus Speed	400.0 MHz	400.0 MHz
Stock frequency	2100 MHz	2400 MHz
L1 Data Cache	8 KBytes, 4-way set associative, 64 Bytes line size	8 KBytes, 4-way set associative, 64 Bytes line size
L1 Trace Cache	12 Kµops, 8-way set associative	12 Kµops, 8-way set associative
L2 Cache	128 KBytes, 2-way set associative, 64 Bytes line size	128 KBytes, 2-way set associative, 64 Bytes line size
L2 Speed	2099.7 MHz (Full)	2399.7 MHz (Full)
L2 Location	On Chip	On Chip
L2 Data Prefetch Logic	yes	yes
L2 Bus Width	256 bits	256 bits
<b>Chipset</b>		
Northbridge	Intel i845GL rev. A1	Intel i845GL rev. A1

Memory Module #1		
designation	A0	A0
size	256MBytes (single bank)	256MBytes (single bank)
<i>Memory Module #2</i>		
designation	A1	A1
size	256MBytes (single bank)	256MBytes (single bank)
<i>DMI Port Connector</i>		

Port #1		
designation	PRIMARY IDE (internal)	PRIMARY IDE (internal)
connector	On Board IDE	On Board IDE
Port #2		
designation	SECONDARY IDE (internal)	SECONDARY IDE (internal)
connector	On Board IDE	On Board IDE
Port #3		
designation	FDD (internal)	FDD (internal)
port type	8251 FIFO Compatible	8251 FIFO Compatible
connector	On Board Floppy	On Board Floppy
Port #4		
designation	COM1 (internal)	COM1 (internal)
port type	Serial Port 16450	Serial Port 16450
connector	9 Pin Dual Inline (pin 10 cut)	9 Pin Dual Inline (pin 10 cut)
connector	DB-9 male	DB-9 male
Port #5		
designation	COM2 (internal)	COM2 (internal)
port type	Serial Port 16450	Serial Port 16450
connector	9 Pin Dual Inline (pin 10 cut)	9 Pin Dual Inline (pin 10 cut)
connector	DB-9 male	DB-9 male
Port #6		
designation	LPT1 (internal)	LPT1 (internal)
port type	Parallel Port ECP/EPP	Parallel Port ECP/EPP
connector	DB-25 female	DB-25 female
connector	DB-25 female	DB-25 female
Port #7		
designation	Keyboard (internal)	Keyboard (internal)
port type	Keyboard Port	Keyboard Port
connector	PS/2	PS/2
connector	PS/2	PS/2
Port #8		
designation	PS/2 Mouse (internal)	PS/2 Mouse (internal)
port type	Mouse Port	Mouse Port
connector	PS/2	PS/2
connector	PS/2	PS/2
Port #9		
designation	USB0 (external)	USB0 (external)
port type	USB	USB
Port #10		
designation	AUDIO (external)	AUDIO (external)
port type	Audio Port	Audio Port
<i>DMI Extension Slot</i>		
Slot #1		
designation	PCI0	PCI0
type	PCI	PCI
width	32 bits	32 bits
populated	no	no
Slot #2		

designation	PCI1	PCI1
type	PCI	PCI
width	32 bits	32 bits
populated	no	no
Slot #3		
designation	PCI2	PCI2
type	PCI	PCI
width	32 bits	32 bits
populated	no	no
Slot #4		
designation	AGP	AGP
type	AGP	AGP
width	32 bits	32 bits
populated	no	no
<i>DMI Physical Memory Array</i>		
Physical Memory Array #1		
location	Motherboard	Motherboard
usage	System Memory	System Memory
correction	None	None
max capacity	2048MBytes	2048MBytes
max# of devices	2	2
<i>DMI Memory Device</i>		
Memory Device #1		
designation	A0	A0
format	DIMM	DIMM
type	unknown	unknown
size	256MBytes	256MBytes
Memory Device #2		
designation	A1	A1
format	DIMM	DIMM
type	unknown	unknown
size	256MBytes	256MBytes
