

Need to use Office on your tablet?

Get the full Office 365® on a tablet with Intel Inside®

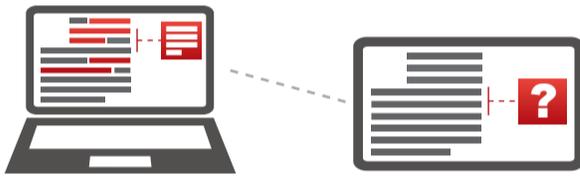

The Intel® Core™ i3 processor-based tablet ran a full version of Office 365® that you can use online and off. Create, edit, and share files right on your tablet—with all the features available in standard PC versions of Word, Excel®, PowerPoint®, and Outlook®.

Risks you might face with a non-Intel-based tablet¹

We faced the following:

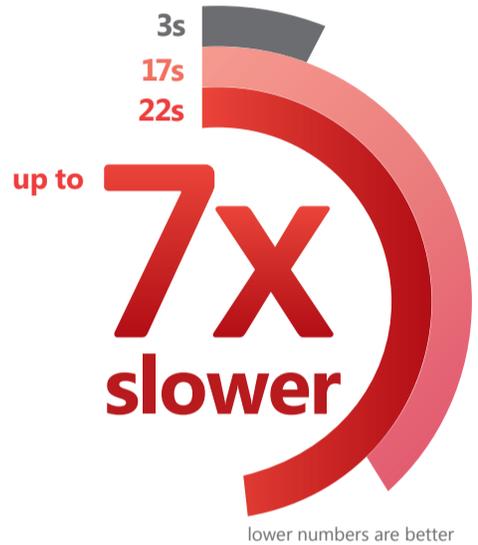

Losing access to content without a connection

Missing important edits and comments from reviewers

Wasting time trying to access missing features

More waiting, less working

Non-Intel-based tablets opened Office documents for editing up to 7x slower than the Intel processor-based tablet

- Intel processor-powered tablet
- Apple® iPad®
- Windows® RT tablet

Common problems we encountered

when using Office on the non-Intel-based tablets

Missing images and/or missing formatting while in Editing view

Inability to save spreadsheets that used unsupported features (macros, data models, and external data connections)

Limited support for PowerPoint animations and transitions
