

Wait less and stay unplugged longer using Microsoft Windows 10 laptops with SSDs

Choose solid-state drives over hard disk drives to improve your Windows 10 laptop experience

When choosing your next Microsoft® Windows® 10 laptop, you have hundreds of options with a wide array of features, form factors, and hardware specs. But there's one thing that affects everything from user experience to performance and even battery life: storage. Choosing the right storage option can help narrow the field and make it more likely you'll be happy with your new device. So, which type of storage—solid-state drive (SSD) or hard disk drive (HDD)—has the most potential to improve your day-to-day experience? And how does storage impact battery life?

Our hands-on testing and review of 38 Windows 10 laptops[†] reveals a consistent story: Choosing a Windows 10 laptop with SSD storage over HDD storage reduces the time it takes your laptop to boot up, shut down, launch programs, and get on the web. Plus, the battery life on laptops equipped with SSDs was longer than the battery life on most of the laptops with HDD storage.

Read on to see how choosing a Windows 10 laptop with SSD storage can make the difference between a great experience and a mediocre one.

Get more even when you spend less

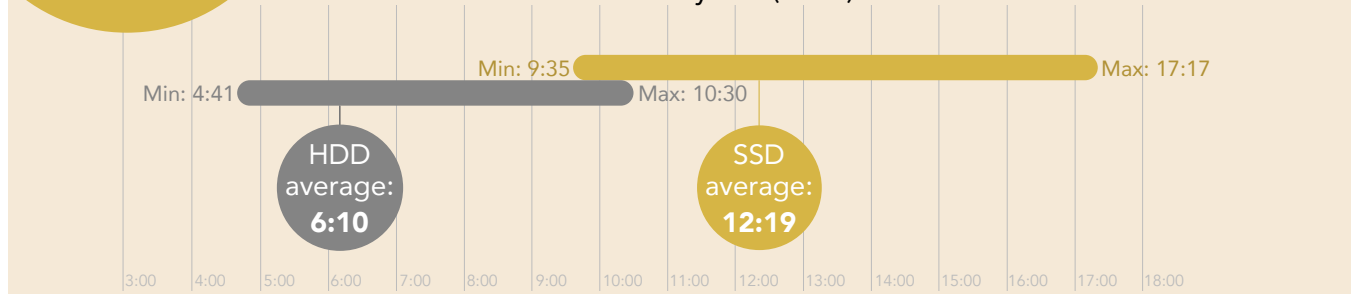

Take full advantage of the internet without breaking the bank

Many people don't need to edit videos or do comprehensive financial analyses that require a terabyte (TB) of storage—they just need an entry-level Windows 10 laptop they can use to keep track of their schedules, create budgets, and access online resources. Our tests show that if price-conscious users choose an entry-level laptop with 64 GB of Embedded MultiMediaCard (eMMC) SSD storage, they get a laptop that accesses the web and online content faster than they could on a system powered by an HDD with 1 TB of storage.[†] Plus, most SSD laptops can also stay unplugged for at least a full 9-hour day according to our video playback results.

A hard lesson you can learn from

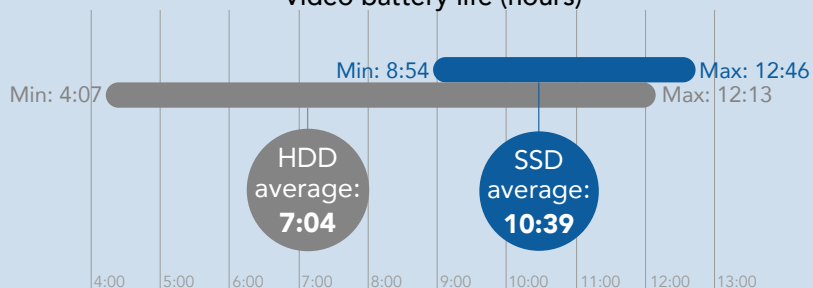

The amount of storage you get isn't as important as the type of storage you get

Imagine you're walking into a retail store to purchase a new computer and you see a mainstream Windows 10 laptop with a 1TB HDD that's on sale. If staying unplugged is important to you, don't be tempted by that high-capacity laptop—our test results show you may need to plug in a mainstream laptop with HDD storage after as few as four hours, whereas every mainstream laptop with SSD storage we tested ran unplugged a full eight-hour workday or longer.[†] HDD-powered laptop users may also have to wait up to 83 seconds every time they power up their machines.

Stop spinning your wheels

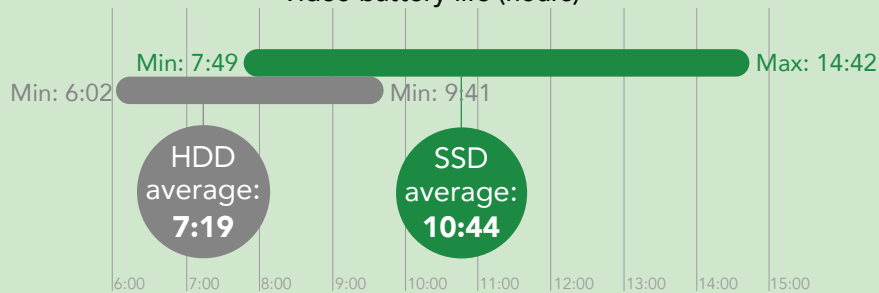

Do what you want, where you want, for as long as you want

Do you need a Windows 10 laptop that excels at everything from mobile office work to effective client presentations? Our tests show that, if a performance-conscious user buys a premium Windows 10 laptop with a 256GB SSD, they could attack their to-do list, keep track of their finances, and write new project ideas in less time than they could on a system powered with a 1TB HDD.[†] And the premium laptops with SSDs we tested come with a minimum of almost eight hours of battery life. Less time waiting or looking for a power plug means you have more time to get important stuff done.

Premium laptops

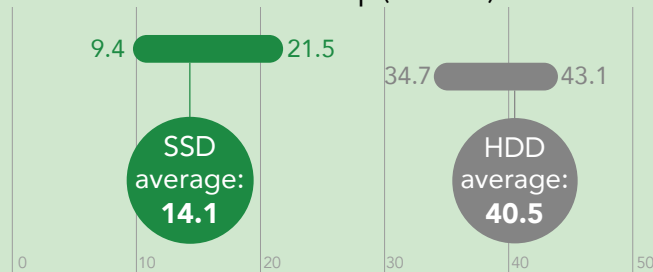

Stay unplugged up to 46% longer

Video battery life (hours)*

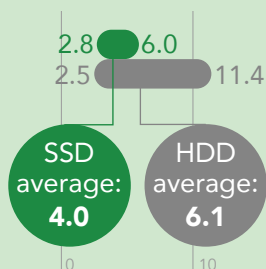

Start up and shut down up to 2.8X faster

Conclusion

If our test results don't convince you that choosing a laptop that provides SSD storage over a HDD is a good idea, just think about how inconvenient it is to find a place to plug in your laptop while you're out and about. Even more convincing: do an experiment. Count the number of times you jump on your laptop daily, whether it's to research something or work on a project, and multiply that number by 1,095 (the number of days in three years). Now consider how many seconds you could be losing every time you start up and shut down, access the web, or jump to the next task. Those seconds turn into minutes and hours very quickly. Think about what you can accomplish in that time.

We concluded our hands-on testing on May 4, 2018. During testing, we determined the appropriate hardware and software configurations and applied updates as they became available. The results in this report reflect configurations that we finalized on September 21, 2018 or earlier. Unavoidably, these configurations may not represent the latest versions available when this report appears.

How we tested

This document details the methodologies we followed in testing the systems

Setting up the system

1. Complete the OOBE on each system.
2. Run Windows Updates.
3. Uninstall any vendor-provided applications. If anti-virus is on the system, leave it and update to latest version.
4. If no anti-virus is installed, install McAfee LiveSafe™.
5. Set the homepage to open to <https://www.amazon.com>, and install the following browsers:
 - a. Microsoft Edge
 - b. Google Chrome
 - c. Mozilla FireFox
 - d. Microsoft Internet Explorer
6. Install and launch the following applications:
 - a. Adobe® Acrobat® Reader
 - b. RARLAB WinRAR x64
 - c. Microsoft Office 365 Word
 - d. Microsoft Office 365 Excel
 - e. Microsoft Office 365 PowerPoint
 - f. Microsoft Windows® ADK Windows Assessment Toolkit
 - g. Microsoft Windows ADK Windows Performance Toolkit

Running the tests

Local Full Screen Video Playback (FSVP) assessment

1. Copy the Microsoft-provided Performance Assessment Toolkit directory (Perf2.4) to the “C” drive.

Running the Local Full Screen Video Playback assessment

You will use the Movies & TV app to play media clips locally, so verify that it is the default application to handle MP4 file extensions.

1. Press the Windows Key, and type Powershell.
2. To Run as Administrator, right-click the powershell.exe.
3. To access the Performance Assessment Toolkit directory, type `cd C:\Users\<User name>\Perf2.4`
4. To launch the script, type `.\performance_assessments.cmd`
5. To run the system preparation script, type P, and the system will reboot. (Note: Do this once per day or after making a configuration change.)
6. After the system reboots, repeat steps 1 through 4.
7. To execute the Battery Life assessment, type 5.
8. After the Battery Life assessment is complete, to analyze the performance result, type A, and record the result.
9. Repeat steps 1 through 8 two more times.

Windows ADK fast startup performance assessment

1. Launch the Windows Assessment Console.
2. Click Options→New Job.
3. Click Create Custom Job.
4. Click Add Assessments, and add the following assessment:
 - a. Boot performance (fast startup)
5. In the left-hand column, select this assessment, and uncheck the “Use recommended settings” box.
6. For this assessment, change the number of iterations to 10.
7. Click Run.
8. Click Start.
9. When the tests finish, record the results, and shut down the system.

Browser and Office application launch times

1. Boot the system and bring up an administrative command prompt:
 - a. Type `CMD`
 - b. To open App options , right-click the Command Prompt app.
 - c. Click the "Run as administrator" button.
2. Type `Cmd.exe /c start /wait Rundll32.exe advapi32.dll,ProcessIdleTasks`
 - a. Do not interact with the system until the command completes.
3. After the command completes, wait five minutes before running the test.
4. Simultaneously start the timer and launch the Microsoft Edge browser.
5. When the browser page loads, stop the timer.
6. Record the result.
7. Simultaneously start the timer and launch the Google Chrome browser.
8. When the browser page loads, stop the timer.
9. Record the result.
10. Simultaneously start the timer and launch the Mozilla FireFox browser.
11. When the browser page loads, stop the timer.
12. Record the result.
13. Simultaneously start the timer and launch the Microsoft Internet Explorer browser.
14. When the browser page loads, stop the timer.
15. Record the result.
16. Simultaneously start the timer and launch Microsoft Office 365 Word.
17. When the template page loads, stop the timer.
18. Record the result.
19. Simultaneously start the timer and launch Microsoft Office 365 Excel.
20. When the template page loads, stop the timer.
21. Record the result.
22. Simultaneously start the timer and launch Microsoft Office 365 PowerPoint.
23. When the template page loads, stop the timer.
24. Record the result.
25. Shut down the system.
26. Repeat steps 1 through 25 two more times, and report the mean average of the three runs.

This project was commissioned by Microsoft.
